## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 3, 4, 6, 11-19, drawn to the blunt dissector of figures 1, 2 and 2a through 2c classified in class 606, subclass 190.
  - II. Claim 7, 8, 9, drawn to the attachment to a surgical instrument of figures 3 and 4, classified in class 606, subclass 144.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have materially different design. Invention I functions as a blunt dissector of tissue. Invention II functions as an attachment to a surgical tool; the attachment is a surgical hook for inserting and placing an implant without dissecting tissue. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

2. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the

Art Unit: 3771

inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
